

Ahmad Almohamad Almossa

Cloud & Cybersecurity Engineer

AWS · Network Engineering · Infrastructure as Code · Cybersecurity · Linux

Professional Profile

IT and Cloud professional with several years of experience in cloud infrastructure, network engineering, IT security and system administration. Experienced in working with AWS environments, network and security concepts, Infrastructure as Code, CI/CD processes, monitoring and the integration of on-premises and cloud environments.

My professional focus is on building, securing and supporting reliable IT infrastructures. I enjoy analysing complex technical problems, troubleshooting incidents systematically and developing practical, secure and maintainable solutions. Alongside my professional experience, I have continuously expanded my cybersecurity and Linux expertise through practical projects and professional certifications.

Core Expertise

Cloud & Infrastructure	AWS, cloud infrastructure, On-Premises / Cloud integration
Infrastructure as Code	Terraform, automation, infrastructure provisioning
Networking	TCP/IP, routing, network architecture, security concepts
Cybersecurity	Security monitoring, hardening, threat detection, incident response
Systems	Linux administration, Windows environments, VMware
DevOps & Automation	Git, CI/CD, Python, Ansible, Docker
Monitoring & SIEM	Elastic Stack, Syslog, log collection and analysis

Professional Experience

Materna Information & Communications SE — System / Cloud Engineering

Worked in cloud and infrastructure environments with a focus on AWS networking, security and automation. Responsibilities included supporting cloud network infrastructure, implementing security concepts, working with Terraform / Infrastructure as Code, supporting CI/CD processes, monitoring systems and integrating on-premises environments with cloud services.

Also gained experience in operational security, monitoring and incident management, including the analysis and resolution of complex technical tickets, handling customer requirements and supporting reliable and continuous IT operations.

Selected Projects

SIEM & Security Monitoring Lab

Practical security monitoring environment using Elastic Stack, Syslog and Python. The project focuses on centralized log collection, analysis, monitoring and security-event investigation.

Cybersecurity & Web Security Lab

Hands-on security laboratory using Linux, Docker, Kali Linux, DVWA and OWASP Juice Shop for learning vulnerability analysis, web security testing, monitoring and defensive security practices.

Cloud Infrastructure & Network Security

Practical work and professional experience around AWS infrastructure, network architecture, security controls and Infrastructure as Code with Terraform.

Linux Administration & Security

Practical Linux administration and security work covering system configuration, hardening, networking, monitoring and troubleshooting.

Certifications & Professional Development

- **LPIC-1** — Linux Professional Institute
- **CompTIA Security+** — Cybersecurity fundamentals and security operations
- **CompTIA CySA+** — Cybersecurity analysis, threat detection and response

Professional Strengths

- Structured troubleshooting and analytical problem solving
- Practical approach to cloud infrastructure and IT security
- Experience connecting infrastructure, networking, automation and security
- Ability to work independently and handle complex technical requirements
- Continuous learning through professional certifications and hands-on labs

Target Areas: Cloud Engineering · AWS · Network Engineering · Cybersecurity · Security Operations · Linux Administration · Infrastructure Automation

This portfolio is intended as a professional overview for talent-pool and recruitment purposes.
